

# Manitoba's Widest Cellular Network

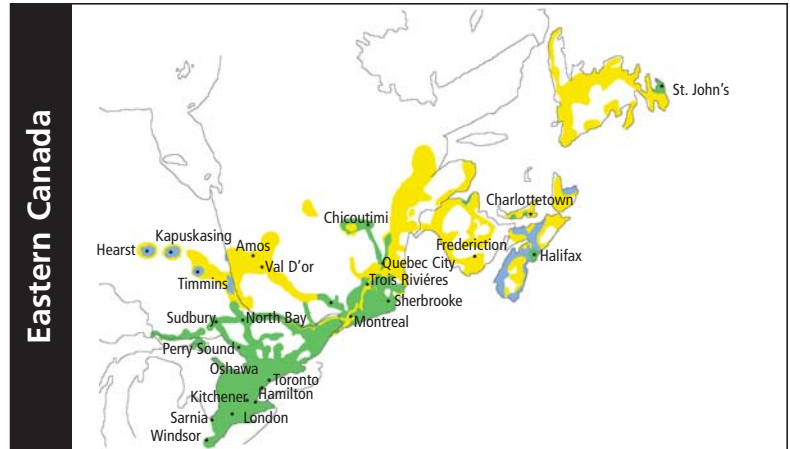

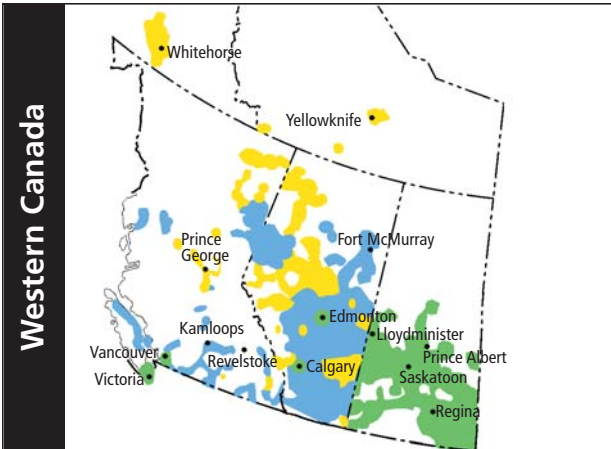

**Notes**  
 Evolution Data Optimized (EVDO) is an enhanced wireless data network that offers peak data download rates of up to 2.4 Mbps – with average speeds up to five times faster than 1X. 1X radio transmission technology is an enhanced digital wireless voice and data network. The 1X network provides customers with data speeds up to 156kbps. All coverage shown is approximate. Actual coverage may vary depending upon customer equipment, antenna placement, topographic and weather conditions. This map depicts MTS Mobility cellular coverage, existing and planned through to the end of 2007. Expansion schedule subject to change.

524/Rev. May 2007

## ROAMING ACROSS CANADA

Enjoy the convenience of MTS Mobility all across Canada. We currently deliver wireless coverage to 94% of the population of Canada. While in Canada, you keep the same airtime and per-call features as your existing plan. Plus pay low per minute long distance rates that let you stay in touch affordably.

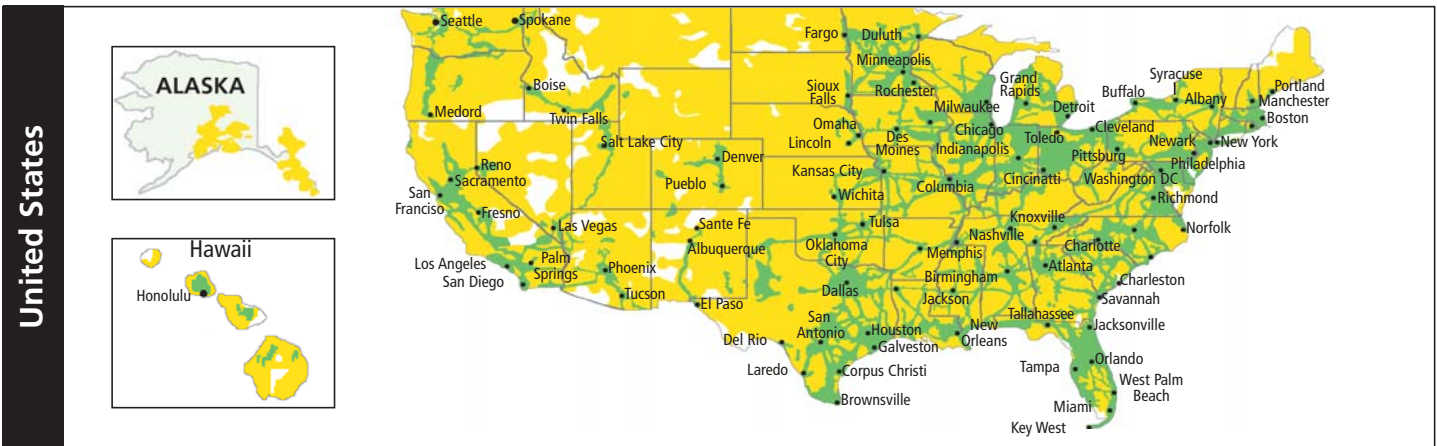

In Alberta and BC, Text Messaging, Mobile Browser Service, and 1x data coverage available in main city centers including Edmonton, Calgary, Vancouver and Victoria. Cellular voice services are available throughout Alberta and BC in all digital and analog coverage areas.

## ROAMING IN THE U.S.

When traveling throughout the U.S., you will have access to digital and analog networks. MTS has extensive roaming agreements, providing seamless access to digital coverage in over 500 cities across the U.S., covering 95% of the U.S. population.

## EVDO ROAMING

Customers on an MTS Mobility High Speed (EVDO) data plan can enjoy high speed data roaming through MTS's roaming partners in a growing number of Canadian and U.S. cities. MTS customers roam on the Bell, Sasktel and Aliant data networks while traveling throughout Canada and on the Sprint EVDO and Verizon 1x data networks while roaming in the U.S. The EVDO cellular network provides customers with the ability to download applications, browse the Internet and access emails and corporate directories using the cellular data network. Customers with an EVDO enabled device will receive seamless interoperability and transitioning from EVDO to 1x coverage areas.

## INTERNATIONAL ROAMING

MTS offers international coverage in many countries including the Bahamas, Bermuda, the Caribbean, the Dominican Republic, El Salvador, Guam, Guatemala, Mexico, New Zealand, Venezuela and the Virgin Isles using the CDMA cellular network. MTS has alternative International Roaming options using the CDMA/GSM network which provides cellular communications to 140 countries worldwide. Because we continue to expand our international coverage, we recommend that you visit [mts.ca/coverage](http://mts.ca/coverage) or call 225-5687 (CALLMTS) for up-to-date information. And before you travel, visit an MTS Dealer or MTS Connect store to verify your phone's international capability.

**Notes:** Actual coverage may vary depending upon customer equipment, antenna placement, topographic and weather conditions. These maps depict the 2007 coverage expansion plans for MTS and list MTS's Roaming Partners as of February 2004. When traveling in the U.S., roaming voice and data charges apply. If you plan on an extended stay in the U.S., call MTS Mobility Customer Service at 225-5687 (CALLMTS) or contact an MTS Dealer regarding roaming plans that may suit your needs. MTS design mark is a registered trademark of Manitoba Telecom Services Inc., used under license.
